YAAKOV SCHEFRES

DOD TS; SCI; Last Investigation: 10/24/2019 yschefres@gmail.com

Proactive Systems Engineer, Space Vehicle Architect, and Manager with 10 years of industry experience seeking an opportunity to lead mission-focused success and influence innovative solutions to complex technical problems. Skilled in Cost Account Management, Class B/C execution, and Model-Based Engineering.

RELEVANT EXPERIENCE — Northrop Grumman Corporation: 2016-Present

Systems Engineering Lead and Chief Architect, Product Line Bus — September 2023 – Present

- Shaped vision for next generation bus product line directly supporting a corporate priority win worth $2B+
- Cost Account Manager for $2M+ and 6 full time employees
- Trailblazed novel methods of customer deliverables, rapid analysis cycle development, and V&V implementation strategy to greatly reduce both recurring and non-recurring engineering costs by more than $10M
- Led Model-Based Engineering development utilizing Cameo, realizing schedule efficiency by 20%

Section Manager, Space System Definition Department — January 2022 – Present

- Managed 11 individual contributors and 1 assistant section manager, providing technical resources, career growth support, and tools to aid in their contribution to successful program capture and execution
- Led Space Vehicle and Bus Internal Review Team providing coordination of over 30 SMEs and functional reviews while providing my own inputs to the SE portion of the review

Space Vehicle Architect, Restricted Program — July 2021 – September 2023

- Awarded Employee of the Month for contributions towards customer intimacy and design integration
- Supported successful capture of sole source award for a program critical to corporate business strategy
- Defined and modeled space vehicle architecture, CONOPS, and space element specification using Cameo
- Established Agile practices across the organization, leading to operational efficiencies in a fast paced program environment
- Implemented trade to reduce cost by more than $9M from baselined technical solution

Mission Engineer, Restricted Capture Effort — January 2021 – February 2022

- Designed and developed a space vehicle constellation Python tool utilizing genetic algorithms as a novel approach to architecture optimization
- Managed assignments for a team of 5 engineers to develop the space constellation architecture tool
- Developed and delivered MATLAB and STK analysis and presented it to customer

Project Manager, Internal Research and Development — September 2020 – February 2021

- Led a team of 3 engineers with a $50K budget to explore the application of a drone to perform 3D mapping and ISR to support the warfighter, as featured on NGC's Front Webpage
- Hosted a demonstration and delivered whitepaper of Pathfinder's capabilities

EDUCATION

University of Southern California, Los Angeles, CA — May 2020
Masters of Science in Aerospace Engineering

California Polytechnic State University, San Luis Obispo, CA — June 2017
Bachelor of Science in Aerospace Engineering, Astronautics Concentration
